

Corner Cubby Compact, Elegant, Functional Home Office Work Space

Description

The Corner Cubby is a corner unit home office that has been designed to fit neatly into a 1m x 1m area of a room. The materials used will blend in with modern living room furniture found in modern open plan living areas.

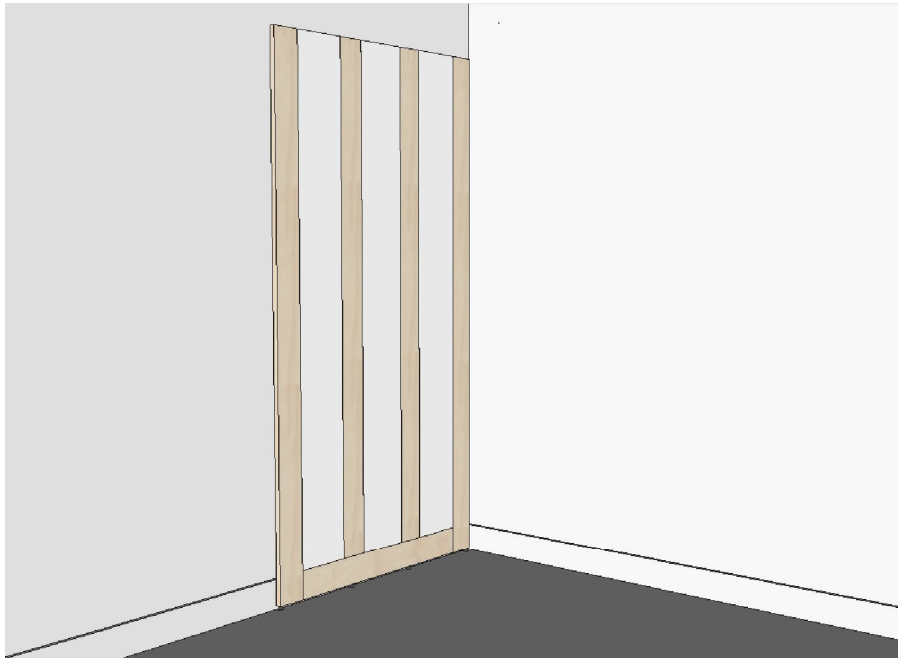

The side panels and folding doors have beech hardwood frames with transparent fabric in-fills. These in-fills are fixed with double sided adhesive tape. It would also be possible for the owner to use fabrics that would exactly match other furniture in the room if wished. We envisage a selection of in-fill fabrics would be offered with the Corner Cubby.

When closed the Corner Cubby has a discrete appearance and houses a 500 mm work top desk, wide and narrow shelves, a roll out storage unit which houses a pencil drawer, a storage drawer and a files drawer. A Jules office chair fits into the closed unit also.

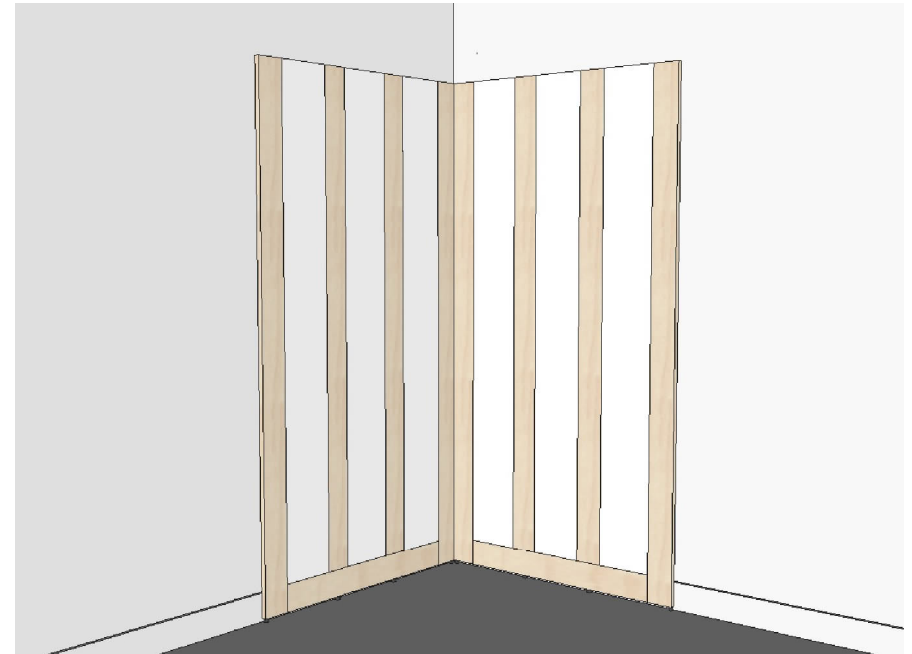

The double folding doors (3) can be folded / stacked against the side panel or used as a privacy screen which allows the user a certain amount of privacy from other room users. Current corner work stations afford little or no privacy as the user is positioned with their back to the room. The Corner Cubby has a side seating position which is reversible to suit either right or left handed users.

The top panel houses a low voltage down-light which is operated by a pull cord. Electrical points can easily be incorporated with standard extensions.

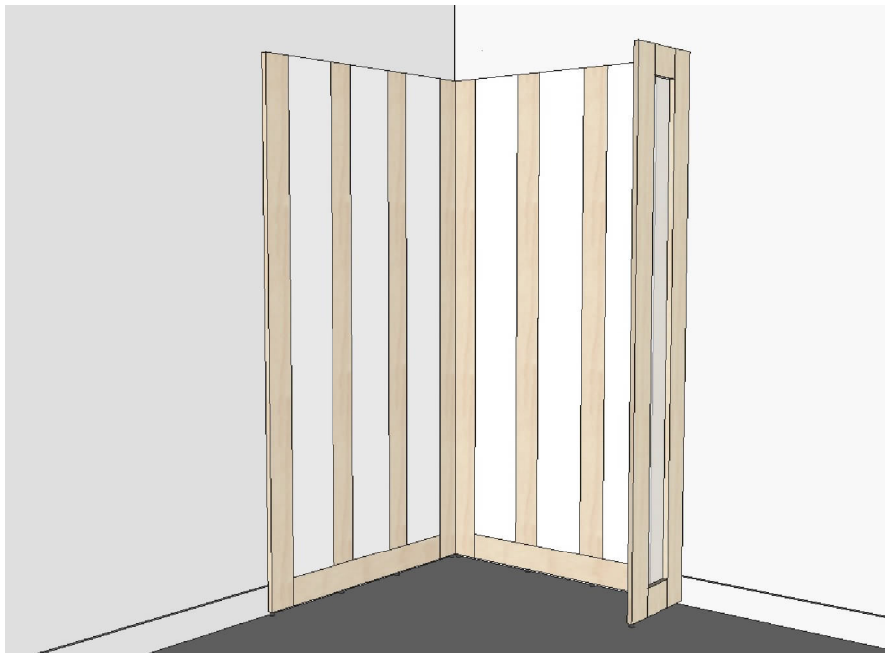

The total unit has been designed with flat-pack production and delivery in mind. The following diagrams show the fabrication process.

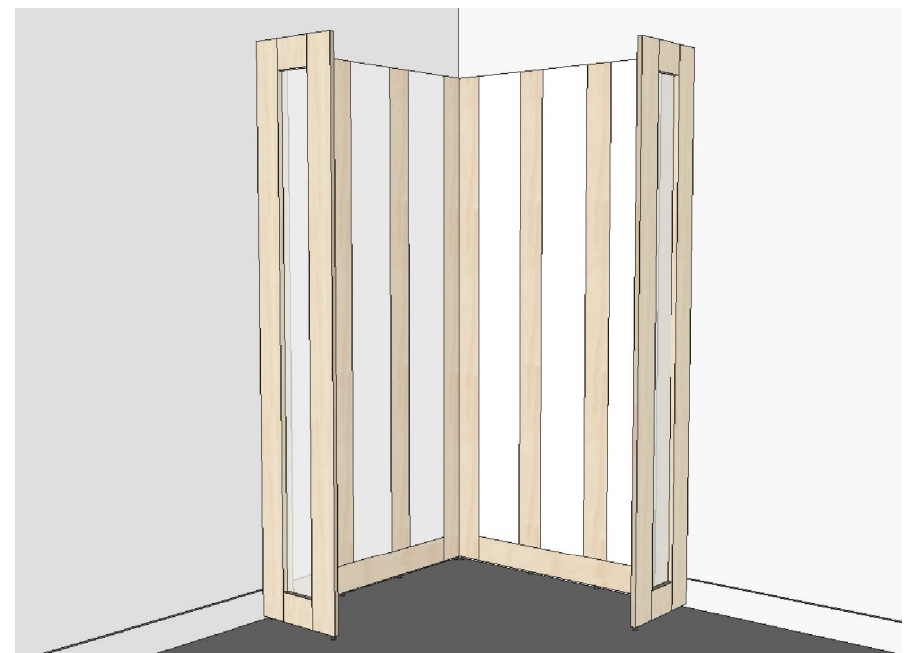

01. Left Side Rear Panel (8 Pieces & 3 Levelers)

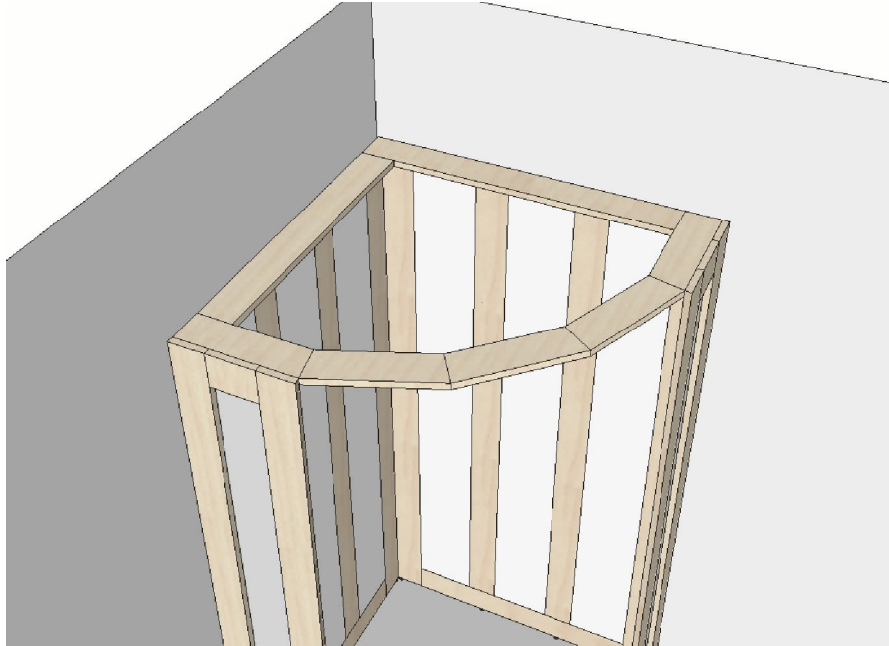

02. Right Side Rear Panel (8 Pieces & 3 Levelers)

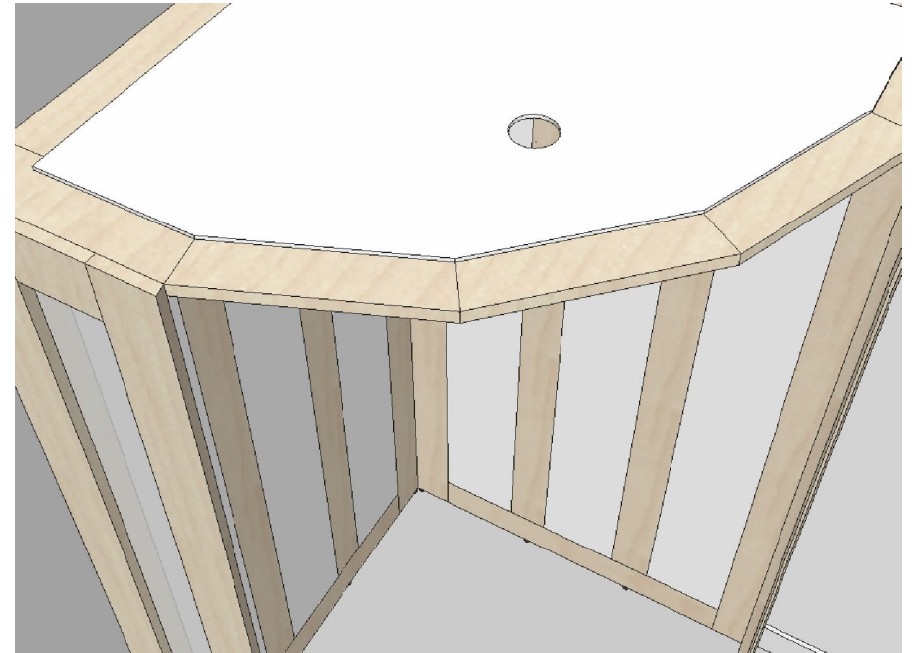

03. Right Side Front Panel (5 Pieces & 1 Leveler)

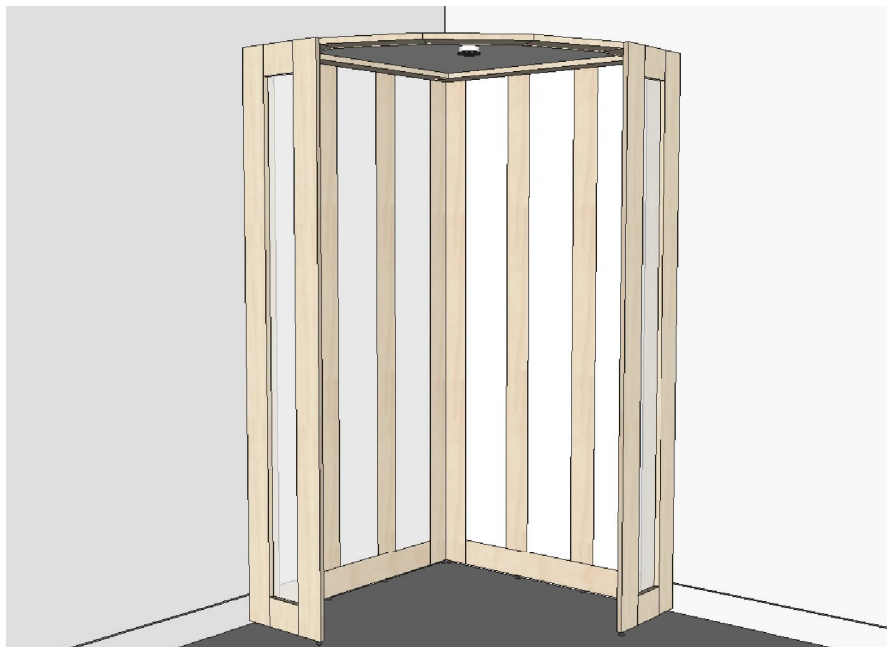

04. Left Side Front Panel (5 Pieces & 1 Leveler)

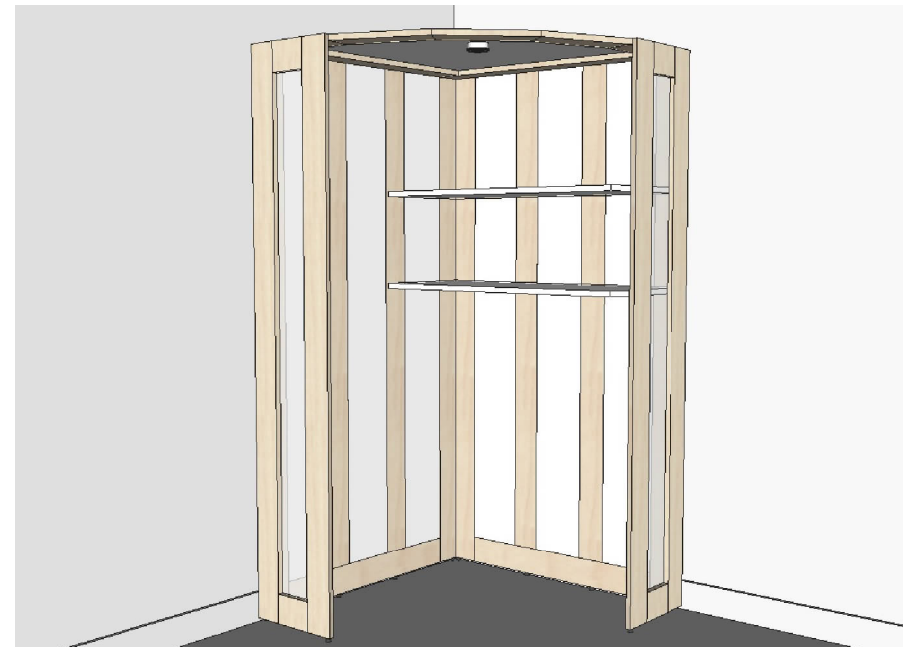

05. Top Frame (7 Pieces)
