

I clearly have multiple "active" section cuts going, so they must be in sep. groups, where do I find that referenced? so I can figure out which group each section cut is in?

these section cuts are inactive

this section cut is active but it does not "cut" the plane

these section cuts are selected, and seem to be "grouped" but I am not clear why, how or how to modify this as I originally tried to "explode the group" but those section planes in blue still seem to be all grouped together?

### Section Cut Clarification Issues
