

The structure of the 2018 toolbar directory. This works in 2018, however it did not work in 2019. I remember that TIG mention that 2019 is less forgiving for errors.

<p>This is the plugin in 2018 that calls the directory, Toolbars.</p>	 <pre>toolbars.rb - Notepad File Edit Format View Help require "sketchup" require "extensions" path = File.join(File.dirname(__FILE__), "toolbars", "files", "loader.rb") ext = SketchupExtension.new("Custom Toolbars", path) ext.description = "Loads your custom Toolbars." ext.creator = "Jim Foltz <jim.foltz@gmail.com>" ext.copyright = "2008 Jim Foltz" ext.version = "2008-04-04" Sketchup.register_extension ext</pre>
<p>This is the structure of the directory Toolbars in my 2018 Sketchup plugin directory.</p>	 <ul style="list-style-type: none"><input checked="" type="checkbox"/> Files<ul style="list-style-type: none">all.Make TXT to installCommands.htmlDisplay_All_Menu.Make TXT to installEdge Styles.txtKenToolsBar.Make TXT to installOptions.txtPages.txt
<p>This is the file and directory in the above directory, "Files". You see the file loaded here.</p>	 <ul style="list-style-type: none"><input type="checkbox"/> Name<ul style="list-style-type: none">Sketchup<ul style="list-style-type: none"><input checked="" type="checkbox"/> loader.rb

This is the structure in 2019 after modification and the plugin works.

<p>This is the plugin in 2019 that calls the directory, Toolbars. I did no mods to this plugin. However, I did notice that the "loader.rb" was in the directory called "Toolbars"</p>	 <pre>toolbars.rb - Notepad File Edit Format View Help require "sketchup" require "extensions" path = File.join(File.dirname(__FILE__), "toolbars", "files", "loader.rb") ext = SketchupExtension.new("Custom Toolbars", path) ext.description = "Loads your custom Toolbars." ext.creator = "Jim Foltz <jim.foltz@gmail.com>" ext.copyright = "2008 Jim Foltz" ext.version = "2008-04-04" Sketchup.register_extension ext</pre>
<p>You can see that I have moved the plugin "loader.rb" from the directory "Files" into the directory "Toolbars".</p> <p>And that was my only change.</p>	 <ul style="list-style-type: none"><input type="checkbox"/> NameFilesSketchupall.Make TXT to install<input type="checkbox"/> Commands.htmlDisplay_All_Menu.Make TXT to installEdge Styles.txtKenToolsBar.Make TXT to installloader.rbOptions.txtPages.txt
