

TomTom

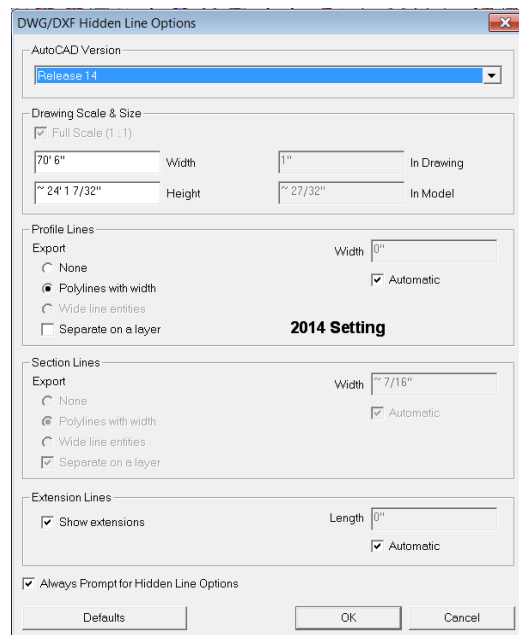

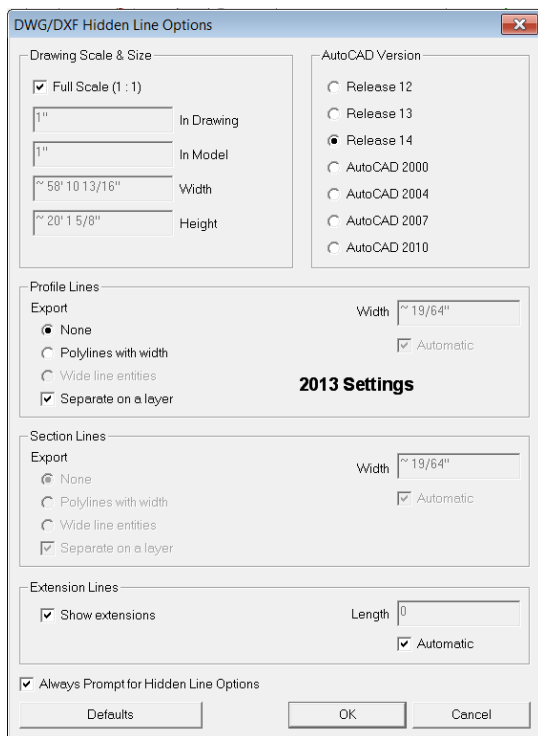

I do models that I turn into CAD files for display in other CAD files. I noticed that SU 2014 was showing hidden lines with the model I was working on at the time. I checked my settings. I saved the file as a SU 2013, then did a CAD export, the hidden lines were not visible.

I saw yesterday you requested more info what I was talking about. So this morning I did some more testing. I found that my model of a buoy, cable and chain when exported to CAD in SU 2014 will not hide hidden lines, however the same model in SU 2013 will export to CAD and not show the hidden lines. As far as I can tell both SU 2013 and SU 2014 have the same settings, shown in the illustration of the setting menus.

I put a model of a box-cylinder-hex as a test model. The box-cylinder-hex model will export correctly, in SU 2014 and SU 2013. However, when I include the buoy, SU 2014 will show hidden lines, as you can see in the buoy and the box-cylinder-Hex.

Now if I hide the buoy, SU 2014 will work correctly and not export the hidden lines, as seen in the box-cylinder-hex model.

So something in the model of the buoy is preventing SU 2014 from exporting correctly.

**2014 Box Buoy Hidden Lines  
Visible**

**2013 Box and Buoy hidden lines  
not showing**

**2014 Buoy hidden, The box's  
hidden lines not visible correctly  
displayed**
