

Solo's Garden pack

This is my original garden pack as made 3 years ago, it was for sale on my old website until I changed it and could not bother with the problems of selling stuff online as the company managing it was charging more than my sales.

I make it available here, and those who have Podium licenses will be able to get them free on the Podium licensed user resources as negotiated last year with the owner.

Glad to see many people using them in renders and some just in raw SU output, these models are medium poly, great for close scenes and can be populated sparingly, all depends on your machine really.

Hope you like them and use them often.

Adenium

Agave

Alocasia

Aralia

Areca palm

Bamboo

Banana palm

Caladium multicolor

Canna

Christmas caladium

Daffodils
